

**amSafeX<sup>TM</sup>**

**Urethra Safe Catheter**

**PREVENTS IATROGENIC URETHRAL INJURY**

**SIZES:**

**12 Fr | 14 Fr |  
16 Fr | 18 Fr |**

**LENGTH:  
16 INCH**

**BALLOON:  
10-15 ML**

**MATERIAL:  
SILICONE  
COATED LATEX**

**iSIP**

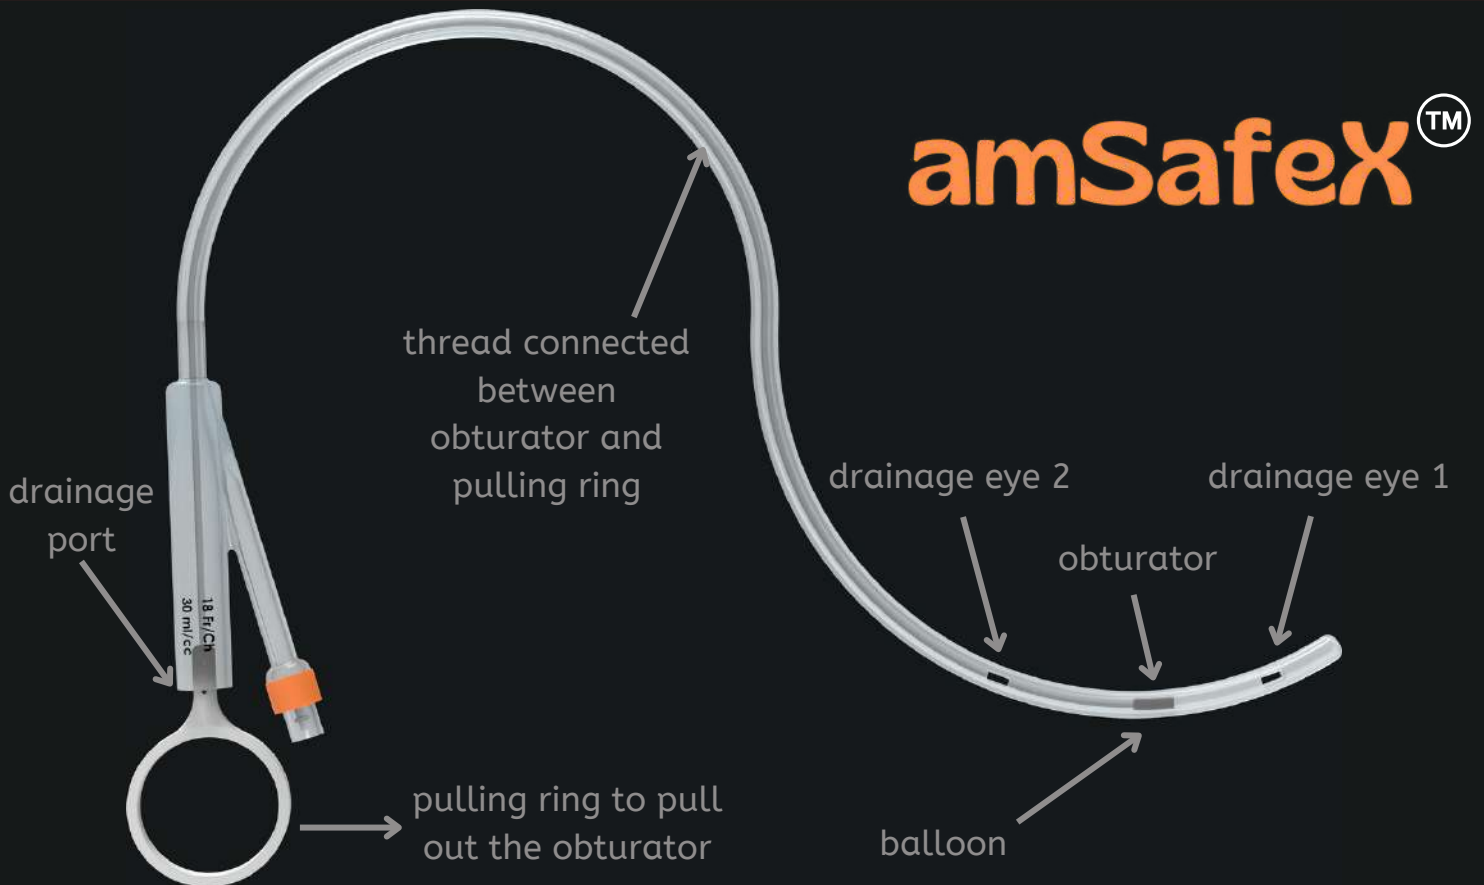

**INSERT**

**SEE THE URINE**

**INFLATE THE BALLOON**

**PULL OUT THE OBTURATOR**

**amSafeX catheter provides a confirmed indication of balloon placement in the bladder, thus preventing urethral injury.**

**amSafeX has two drainage eyes, distal eye 1 and proximal eye 2. In amSafeX eye 1 temporarily remains blocked with an obturator connected to a thread which in turn is connected to pulling ring at the drainage port.**

**With eye 1 blocked, urine will drain from eye 2 thus indicating that balloon portion of catheter has reached inside the bladder.**

**Post inflation of balloon, eye 1 is unblocked by pulling out the obturator, unblocking urine drainage from eye 1.**

Univlabs believes that cutting-edge, world-class medical devices should be available to all healthcare providers regardless of their clinic size or geographical disadvantage.
